understanding your needs

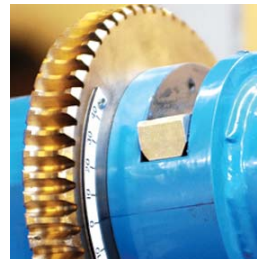

The Automotive Industry operates at an ever-increasing pace. Standards of cost, quality and delivery are everyday pressures - regardless of the size of company

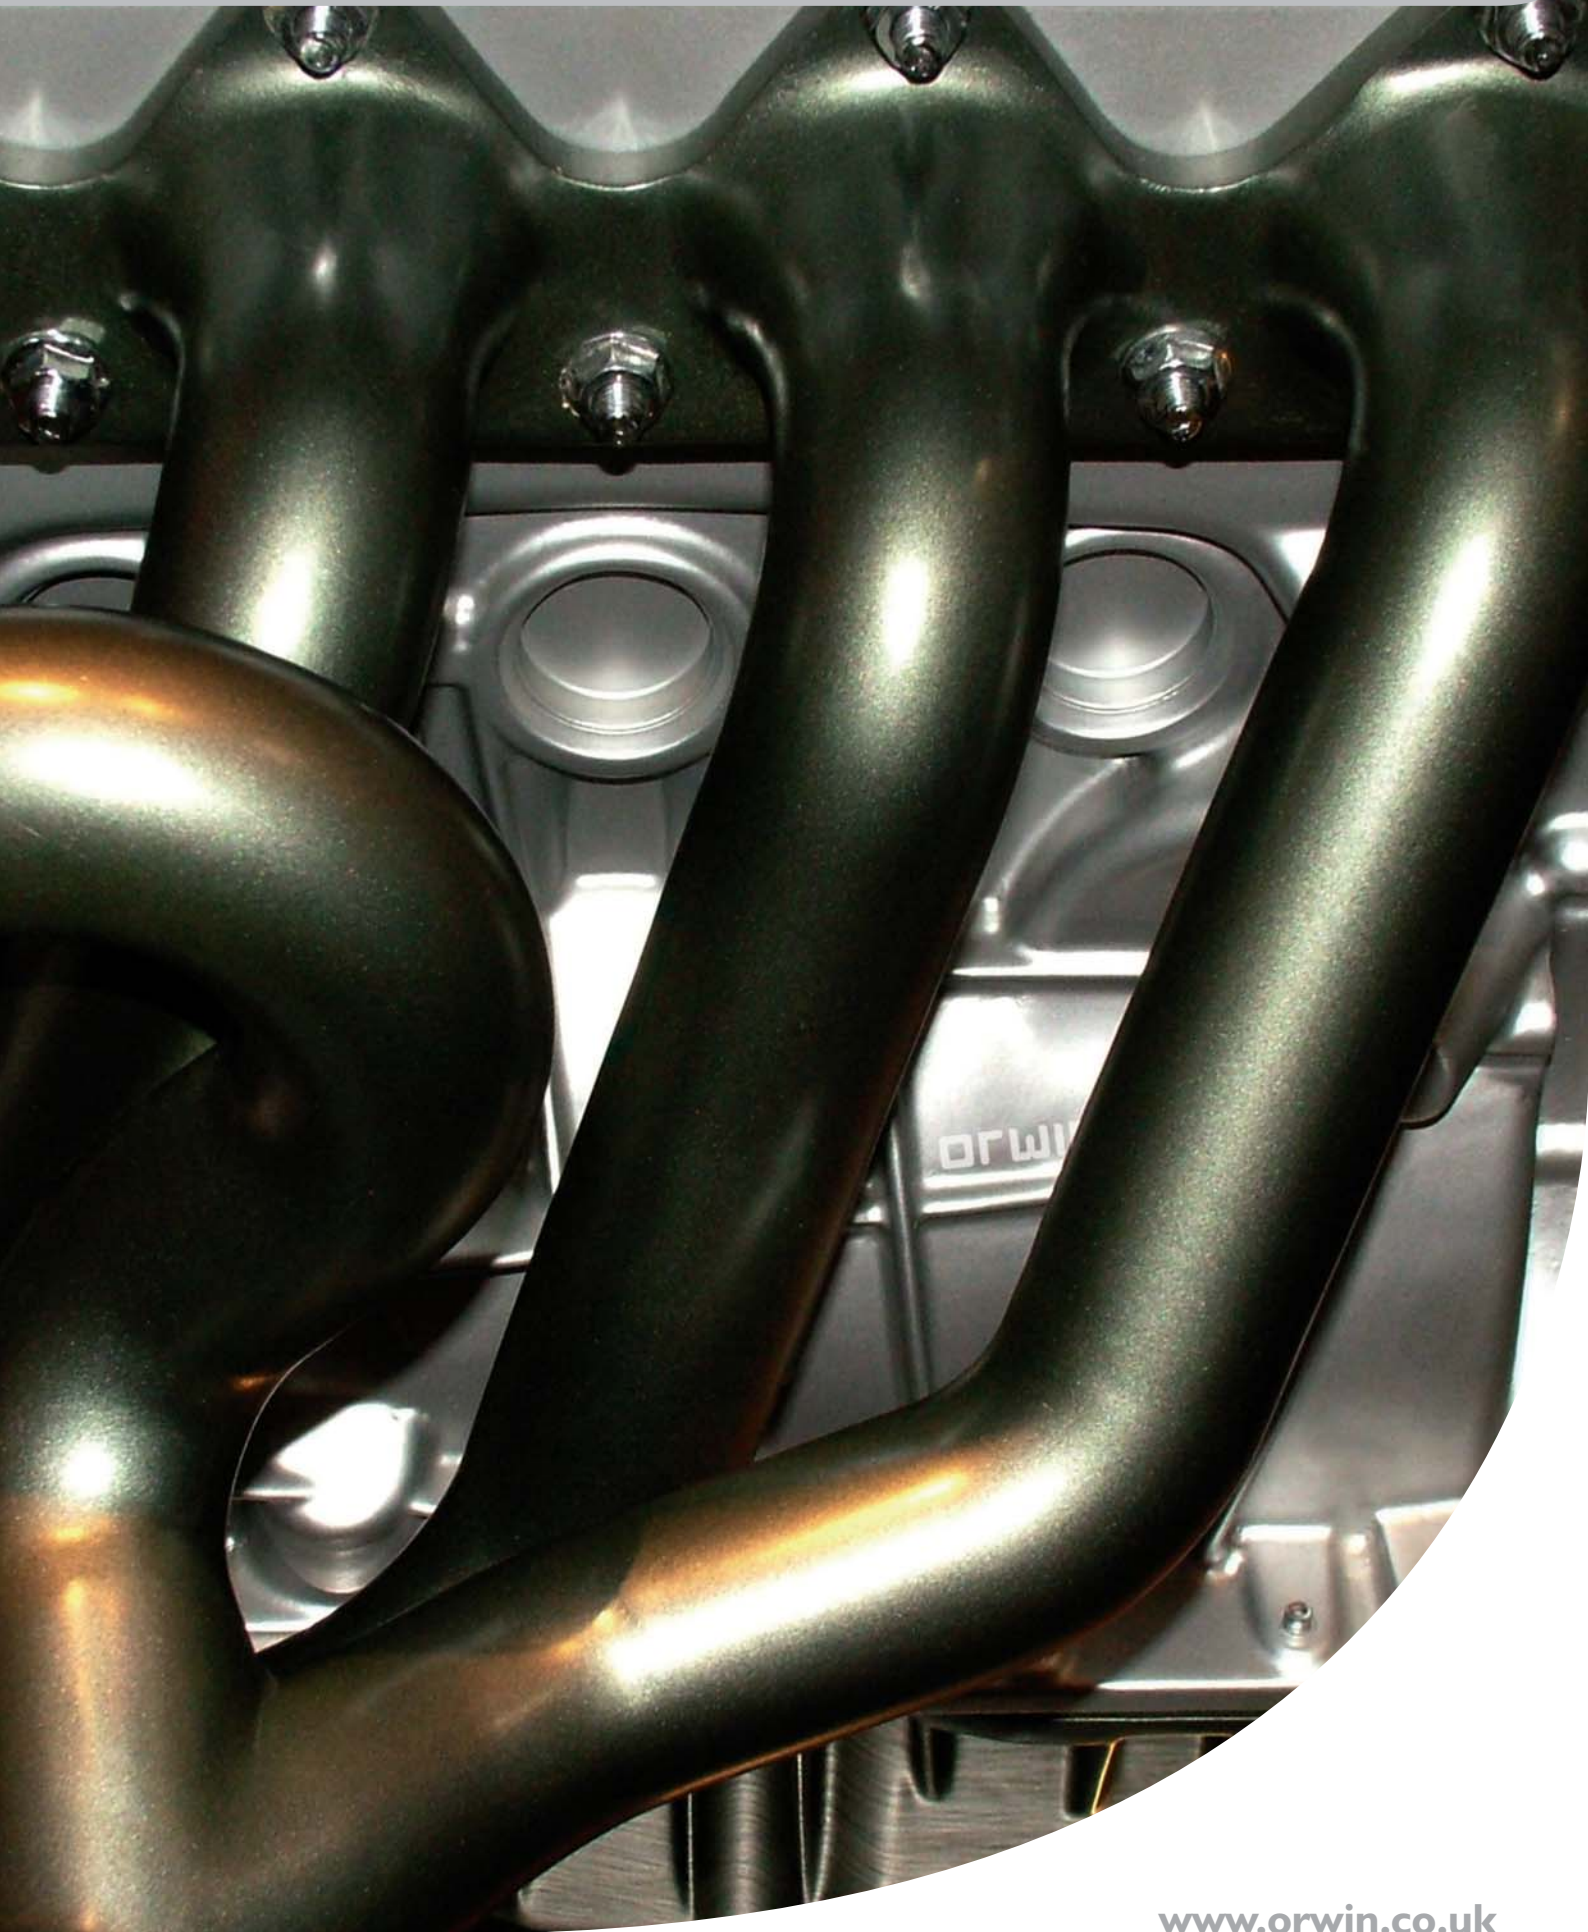

Meeting these challenges gives companies a critical competitive edge, maximising profitability and supporting growth. Finding innovative methods of production helps your business get products to market faster at a lower price, ensuring you gain as high a percentage of the marketplace as possible.

In order to achieve this you will be constantly assessing and developing the processes and systems that are at the heart of your operations. Identifying opportunities to make improvements and stay ahead may require the sourcing of external expertise.

You need a team you can trust to find the right solution for your product. Whether you have the seeds of an idea or an exact blueprint, you want to talk to people with the experience and technical expertise to understand and then take your project forward in a timely and effective manner.

Orwin has a proven track record in delivering successful manufacturing solutions for leading companies across the world. We have built and developed long-term relationships based on our core strength of delivering automation and special purpose equipment with the highest rate of return on investment.

finding the right solution

Converting innovations into reality by the effective use of technology is a technique only developed through experience.

To create the ideal high precision machinery solution to fulfil your manufacturing needs requires a combination of skills. The diversity offered by our specialists, working in close collaboration with you, will ensure key requirements are delivered and the optimum solution reached.

Using our knowledge of the latest technologies and applying it to your manufacturing needs is an approach we can employ across a wide range of projects, as well as bringing to bear the benefit of our experience of proven past concepts.

This means that you can be absolutely confident in our ability not only to deliver, but also provide crucial added value that can make the difference to the end result.

We select the right specialists for each of our project teams based on their understanding and considerations of the Automotive Industry.

Our ability to bring this capability and skill together creates greater cohesion and closer communication, as well as providing you with a single point of contact throughout the project.

This is how our team delivers each and every project to achieve the best results for your business.

delivering the complete solution

The technical knowledge of our designers, our project management capability, the production skills of our manufacturing staff and the commissioning expertise of our engineers will take your project from initial concept to final delivery, all under one roof.

Throughout this process we will provide you with constant progress updates, working to pre-agreed milestones and detailed buy-off specification, putting you in control every step of the way. This approach has enabled us to build long-term working relationships with some of the world's leading companies.

Working with global industry leaders also requires the highest quality standards and processes with the ability to support equipment on a global basis. Orwin has the capability to support these requirements.

This has given us expansive knowledge of market requirements and the latest technology available, which we use to aid all of our projects. In addition to this, constant investment in 3D design capabilities, CNC

and CAD facilities, information technology and our people means we remain a business built on a sustainable platform for the future.

Orwin offers you a complete solution. We will work with you to create automation or special purpose equipment to match your requirements and ensure the final result operates effectively to carry out your manufacturing needs with precision every time.
